

TECHNICAL DATASHEET

IRON RUSTING AGENT 0857

THIS ALLOWS TO RUST FERROUS METALS QUICKLY AND EVENLY.
GATES – LOCKS – FURNITURE – OBJECTS.

RUST IS A BURNING-PROCESS AND DOES NOT APPEAR INSTANTLY.
TIME TAKEN VARIES ACCORDING TO DIFFERENT METALS

The rusting agent is used on a non-carboned, unvarnished, unpainted and clean metal. It can be applied with a sprayer, brushed or dipped. This gives a beautiful rust in 3 or 4 days depending on the metal. For sheets it is advisable to sand to sand them first. Warning: The 2nd day rust appears and seems to be sufficient, but it is very superficial and falls off when the finish is applied.

APPLICATION:

- by sprayer : spray the rusting agent **once or twice a day**
- with a brush : apply generous layer **once or twice a day**
- by dipping : this method is suitable for small parts.

Dispose the metal 1h-6h or even more. Then leave the metal in the open air. Repeat this process if necessary.

Rust is a combustion process and **can be accelerated** by applying hydrogen peroxide when it begins to rust (2nd day). When rust is obtained as desired, **rinse** the piece with water and then when dry, brush with a fine wire brush to remove the blooms and then apply a neutralizer after the 0858 (in the same way as 0857) which will stop the effect of iron rusting 0857.

FINISH

The rusted metal must be protected, we offer our RUST PROTECTOR 0861 that exists in satin or matt for outside and inside use. You can also decorate these rusted parts with our RUST PROTECTOR PASTEL 0862 in WHITE - BLUE - GREEN - PINK – YELLOW.

Security:

- ✚ Please read the security instructions carefully,
- ✚ work in a well aired room,
- ✚ wear rubber gloves,
- ✚ keep out of reach of children.
